

LOOPS

Looping Statements: Looping statements execute a block of code repeatedly until a condition becomes false.

Types:

1. for loop
2. while loop
3. do-while equivalent
4. for loop over collections

1. for loop: Used when number of iterations is known.

Syntax:

```
for i in range(start,end):  
    statements
```

Example1:

```
for i in range(1,6): print(i)
```

Example2:

```
for i in range(2,11,2): print(i)
```

2. while loop

Syntax:

```
while condition:  
    statements
```

Example1:

```
i=1
```

```
while i<=5:
```

```
    print(i)
```

```
    i+=1
```

Example2:

```
i=5
```

```
while i>=1:
```

```
    print(i)
```

```
    i-=1
```

3. do-while equivalent

Python has no do-while. Use:

```
i=1
```

```
while True:
```

```
    print(i)
```

```
    i+=1
```

```
    if i>5: break
```

4. for loop over collections

```
nums=[10,20,30]
```

```
for n in nums:
```

```
    print(n)
```

```
names=['Ram','Sam','Tom']
```

```
for s in names:
```

```
    print(s)
```
